

The SAIGA Rifle

By

ARSENAL inc.

caliber:
7.62 x 39 mm

Arsenal, Inc.'s SGL10 (Saiga) Rifle

From the combined effort of Legion Ltd, the custom shop of the legendary Izhmash Factory in Russia, and Arsenal, Inc. of Las Vegas, Nevada comes a new SGL10 (Saiga) rifle in 7.62x39 caliber. Initially manufactured by Legion Ltd in Russia and remanufactured by Arsenal, Inc. in the United States, the new SGL10 (Saiga) rifle has everything that collectors and shooter have been looking for. Hand-select premium components, custom-shop-like attention to details by Legion Ltd, and Arsenal, Inc.'s highest standards of workmanship, give this rifle its superior quality. Arsenal, Inc. remanufactures the SGL10 (Saiga) rifles in the United States with 922r compliant parts and fills them with features not seen on any other factory Saiga rifles. Performing the most difficult modifications to achieve, Arsenal, Inc. has done a substantial work for the customer. The end result is the highest quality SGL10 (Saiga) rifle with the most desired features which have not been available before. This variation of Saiga rifle serves as the perfect platform for the enthusiasts to build many interesting original Russian AK projects, keeping the necessity and cost of replacement components and labor to a minimum. Every unit is laser sighted and test fired. Targets are included with most of the rifles.

Compared to Arsenal, Inc.'s SGL10 (Saiga) rifle, with other Saiga rifles the customer has to purchase over \$500 worth of additional parts and components and spend hundreds of dollars on labor, and still will not be able to come close to having a great quality Russian rifle with all the correct markings and features. See the comparison table below for more details!

<i>Arsenal, Inc. SGL10 (Saiga) Rifle</i>	<i>Other Saiga Rifles</i>	<i>Added Value</i>
<p style="text-align: center;">Markings</p> <p><i>The receiver has the proper markings on both sides without any extra commercial markings. The left side of the trunnion block includes the legendary Izhmash Factory logo, the upward pointing arrow in triangle.</i></p> <p><i>The markings on both sides of the receiver are done with the correct font type and size.</i></p> <p><i>The markings on the receiver are placed in their proper locations. This does not let them get in the way of any future modification, such as the addition of the catch on the left side of the receiver for the side-folding buttstock.</i></p> 	<p>Non-standard extra commercial markings. No Izhmash logo.</p> <p>Large commercial font size.</p> <p>Improperly placed markings that hinder the modification process.</p>	<p>Requires hours of additional labor to achieve only a fraction of the features available on Arsenal, Inc.'s rifle.</p>

<i>Arsenal, Inc. SGL10 (Saiga) Rifle</i>	<i>Other Saiga Rifles</i>	<i>Added Value</i>
<p><i>The rifle comes with a US made muzzle brake (compensator).</i></p> <p><i>This brand new production compensator for 7.62x39 caliber rifles carries the Arsenal Inc logo and the "US" marking as a testament to its uncompromising quality. The new compensator combines a slick design with detailed attention to perfect functionality and workmanship.</i></p> <p><i>This compensator is made in one piece and incorporates the ever popular cresset design. The one-piece design creates a perfectly symmetric compensator, resulting in an equal amount of excess gas escape and uniform recoil reduction with no negative effect on accuracy.</i></p> <p><i>Utilizing precision cutting machines, Arsenal Inc. ensured that the unit is coaxial, with the threads and the two concentric circular openings being centered and perpendicular to the cylindrical body of the compensator.</i></p> <p><i>The combination of high grade tool steel and sophisticated heat treating process in vacuum furnaces result in a compensator that maintains its perfectly cylindrical shape, free of any warping, deformation, collapse, or surface contaminants.</i></p> <p><i>The consistent and precision cut 24x1.5mm right-hand threads eliminate the wobbly effect common with other units. The compensator remains rock solid on the front sight block.</i></p> 	<p>No muzzle attachment. No threads for muzzle attachment.</p>     	<p>\$100.00</p>

Specifications

Caliber	7.62 x 39 mm
Total Length (with Compensator)	1,016 mm (40 in.)
Barrel Length	415 mm (16.3 in.)
Rifling	4 grooves
Twist Rate	1 in 240 mm (9.44 in.)
Weight without Magazine	3.24 kg (7.15 lbs)
Muzzle Velocity	710 m/s (2,329 fps)
Effective Range	500 m (550 yds)
Maximum Range	1,350 m (1,480 yds)
Rear Sight Range	1,000 m (1,094 yds)
